

EVA TROCAR

A GROUND-BREAKING TROCAR CANNULA

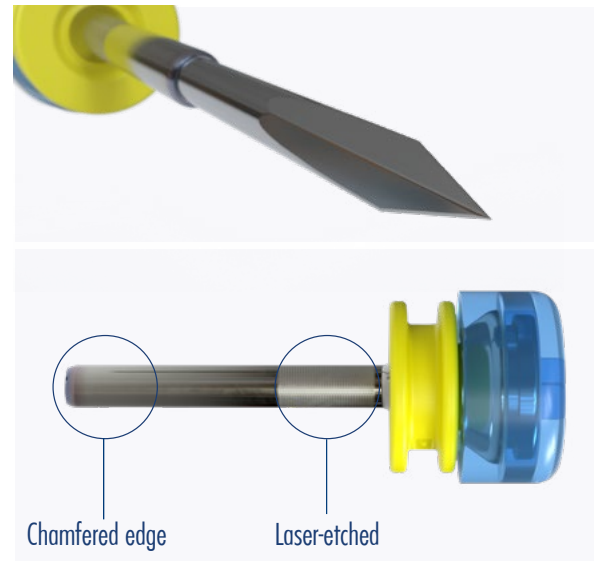

Improved control, performance and usability

The New EVA Trocar is a groundbreaking cannula designed to improve control, performance and usability. It is the first system to feature the patentpending Push-Fit infusion connection, plus a unique laser-etched retention feature. Benefits to surgeons and patients also include improved flow rates, smaller working size and more stable intra-operative IOP.

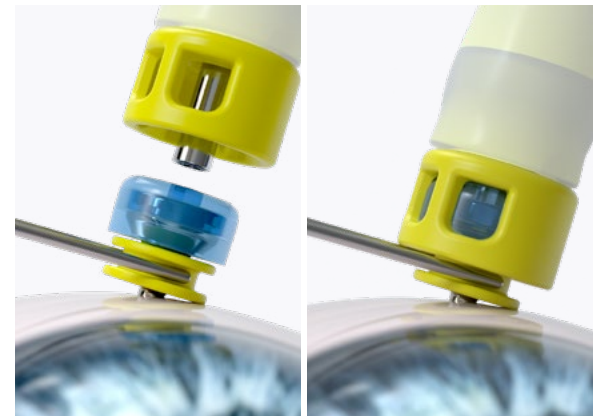

COMPLETELY REDESIGNED CANNULA FOR MAXIMIZED CONTROL

- MVR blade for smooth insertion and optimized wound closure
- Chamfered leading edge optimizes incision and wound architecture
- Laser-etched design for maximum retention in sclera
- Intuitive instrument insertion

HI-FLOW™ INFUSION LINE WITH INNOVATIVE PUSH-FIT* CONNECTION FOR IMPROVED PERFORMANCE

- Secure, stable connection during surgery
- No need to remove the valve: it is placed over the trocar cannula
- Maximized flow rates in all gauges
- Easy switching of infusion ports

SMART FEATURES FOR OPTIMISED USABILITY

- 3mm/4mm scleral markers
- New valve designed to minimize leakage
- Color coded by gauge
