

"I have recently upgraded to DORC's newly launched EVA NEXUS Ophthalmic Surgical System for Phaco and Vitrectomy, which has truly impressive improvements from their earlier versions of the EVA machines, particularly on Phaco performance.

I found that their 1.8mm straight "EquiPhaco" needles, which features newly designed fluidic dynamics, coupled with a new feature called "SMART IOP" with VacuFlow Valved Timing intelligence (VTi) in EVA NEXUS's Phaco programme, has proven to me that the performance of EVA NEXUS is comparable to the current popular "phaco-only" platforms I use. I was incredibly impressed with anterior chamber stability and its consistency in safely dealing with more complex cataracts."

Mr Lavnish Joshi

Consultant Ophthalmologist
& Vitreoretinal Surgeon
Ashford & St Peter's Hospitals
