

Disposable Microforceps: Eckardt End-gripping (25 gauge / 0.5 mm)

Article No: 1286.WD05

Andy Morris FRCOphth,
Consultant in Ophthalmology,
University Hospitals Dorset

“When I tried the DORC 1286.WD05 25G Eckhardt Forceps for the first time, I was very impressed. They make it easier to engage just the right amount of membrane for peeling, and perform particularly well with thicker membranes. The tips are precise yet broad enough to minimise shredding of the membrane. Adjusting to this new forcep design is straightforward and rewarding.”

- Microforceps with ‘nail-like’ end-gripping platforms
- For precise grasping and improved visualization of thin membranes in the macular region
- Developed with Prof. M.D. Claus Eckardt.
