

# MICS 1.8 mm Disposable phaco set with 30° straight flared needle

Article No: 8430.18SF1

**“The new EVA EquiPhaco™ needle allows me to perform cataract surgery with high aspiration flow and vacuum settings with incredible anterior chamber stability. EVA Phaco system reliably copes with cataracts of all grades.**

**I use EVA for all my cataract surgeries and think that the new EVA EquiPhaco™ needles are a big step forward, because they optimize the fluidics and reduce my ultrasound phaco time. The new sleeves provide optimized infusion that allows me to work with low irrigation pressure in the anterior chamber. Even in the most complicated cases EVA EquiPhaco™ offers maximum efficacy, maximised safety with reduced use of energy and optimal preservation of the corneal endothelium.”**
