

## Sure Touch Phaco handpiece

Ref. 3002.P

**“DORC’s new Sure Touch Phaco handpiece lives up to its name.”**

“The grooves give you a great grip and the handpiece itself is perfectly balanced. It’s astonishing to find out how light the handpiece is - it’s even lighter than its own connector. At first I was worried that its performance could suffer from the lightweight design, but that’s not the case. Its phaco power delivery seems even more progressive compared with the phaco handpieces which we used for surgery in the past.

Also, the black coating of the Sure Touch handpiece does not only look great, but it’s also very hard to scratch. The new Sure Touch Phaco handpiece is a perfect accessory for our EVA surgery system.”
