

EVA AVETA™

25G Cannula set with high flow infusion line

Article No: 1272.ED25

**Shunji Kusaka,
MD, PhD, Japan**

“Among various new features of AVETA I am mostly impressed by the two outstanding innovations. First, it’s easier insertion of the trocar made possible with the chamfered edge of the cannula.

Second - no necessity to remove the valve due to Push-Fit connection, which delivers high flow and does not come off during vitrectomy. With AVETA, I am sure that all surgeons can perform vitrectomy safer and comfortably.”
